

Easy to use, flexible, wireless.  
No cables Nothing between  
you and the patient.

No leads,  
no pins,  
no connectors.  
No recharging  
batteries.  
No sleeves..

Neoprobe, advanced Sentinel Node detection system available, has been tried, tested and proven, providing peak performance in changing surgical procedures.

Easy to use, Neoprobe is autoranging, focus audible feedback on detected energy level for more precise localization as well as being software upgradeable

Lightweight, flexible without cables that complicate the surgical field, it is 50% more sensitive than the corded probe, able to detect lower energy levels.

Neoprobe uses integrated, Bluetooth® technology, the same technology that recognizes your mobile phone the instant you get into your car.

It is the only wireless option available that complies with Australian standards, HICMR and AS4187.  **Bluetooth™**

The console operates with mains power, no need to charge batteries overnight, simply push auto-link and you are ready to go.

Neoprobe collimators are shielded with a high medical grade, tungsten steel. The probe will not be effected during surgery by devices such as the diathermy pencil, no annoying noises in the background.

GRC Surgical are working on future technology now, with potential changes to current practices patients will have a one stage solution compared with the current 2 stage practice. More convenience, less pain and greater accuracy as the end result.

GRC Surgical conduct performance testing as well as optimisation for all types of Gamma detection devices used in the operating theatre.

We offer extended warranties for repairs and parts to products that fall outside the normal 12 Month period. Our service centre, based in Australia has faster turn around times compared to overseas centres. There is no downtime for GRC customers, we supply loan units whilst repairs or servicing takes place.

GRC are flexible, offering products and services in ways to suit our customers, leasing, rentals and even short term loans.

At GRC Surgical, we focus and specialise in Sentinel Node biopsy for all clinical applications.

Our dedicated trained technical team offer ongoing support via education within all hospital departments. With years of experience working in the operating theatre environment, their technical knowledge can be invaluable to hospitals.
